What we measured on a device

This audit is a desk review of store listings, privacy labels, developer pages and independent articles; no app was installed or measured on a device for this report.

How we decided

Each app was scored 0 to 5 on eight criteria: core task fit (Q1, 0.20), accuracy and reliability (Q2, 0.15), offline use and no account (Q3, 0.15), privacy (Q4, 0.15), ads and price (Q5, 0.10), accessibility and localisation (Q6, 0.05), maintenance (Q7, 0.10) and risks (Q8, 0.10). The weighted total is the sum of score times weight. A gap of 0.3 or less between the top two totals is called a tie. Every score cites a dated source; claims that could not be verified are marked unverified and scored 0 or 1.

What we could not verify

- Last update date and version of FuelFare: Trip Cost Calculator on the App Store were not shown on the page.
- Price, Android version requirement and rating of every Android listing were not shown beyond an Install button and content rating.
- Offline use and account requirements of five iOS apps other than FuelFare were not stated on their listings.
- Update dates of Roadtrip: Fuel & Trip Planner and FuelCost: Route Gas Calculator on iOS were not shown.
- The year of version 2.4.0 of Fuel Cost Calculator: Trip (Phan Nhat Đang) on iOS was not shown.
- Number of languages and accessibility features of all Android apps except Fuel Calculator: Gas Mileage were not stated.
- Calculation accuracy of every app was not tested and no independent test of any app was found.

This is a desk review of store listings read on 2026-11-05 through the US storefronts; no app was installed or tested on a device, so calculation accuracy and saving of presets were not measured. Store pages were read through an extraction tool, so most quotes are marked as paraphrases. Ratings, prices, privacy labels and update dates change, and developer-declared privacy labels are not verified by the stores. No independent reviews of the individual apps were found. Other apps for this task may exist.
